IE 554 Project – Mathematical Models

Emek Irmak & Ömer Turan Şahinaslan

CONTENTS

1 Dominator Partition Model (variable k)

Sets & Parameters

$G = (V, E)$: a graph with vertex set V of size n and edge set E

Decision Variables

x_{vi}: 1 if vertex v is assigned to the ith block

y_i: 1 if the ith block is used (non-empty)

d_{vi}: 1 if vertex v dominates block i

Objective Function & Constraints

$$\min \quad \sum_{i=1}^{n} y_i \qquad \text{(minimize the number of blocks used)}$$

$$\text{s.t.} \quad \sum_{i=1}^{n} x_{vi} = 1, \quad \forall v \in V \qquad \text{(each vertex is assigned to one block)}$$

$$x_{vi} \leq y_i \quad \forall v \in V, i \in V \qquad \text{(vertex assigned only if block used)}$$

$$\sum_{v \in V} x_{vi} \geq y_i \quad \forall i \in V \qquad \text{(block used only if it is not empty)}$$

$$x_{ui} + d_{vi} \leq 1 \quad \{\forall u, v \in V \mid \{u, v\} \notin E\}, i \in V \qquad \text{(domination condition)}$$

$$\sum_{i=1}^{n} d_{vi} \geq 1 \quad \forall v \in V \qquad \text{(each vertex dominates at least one block)}$$

$$d_{vi} \leq y_i \quad \forall v \in V, i \in V \qquad \text{(cannot dominate an empty block)}$$

$$\sum_{v \in V} x_{vi} \geq \sum_{v \in V} x_{v,i+1} \quad \forall i \in \{1, \ldots, n-1\} \qquad \text{(blocks are used in order)}$$

$$x_{vi}, y_i, d_{vi} \quad \forall v \in V, i \in V \qquad \text{(binary variables)}$$

2 Dominator Partition Model (fixed k)

Sets & Parameters

$G = (V, E)$: a graph with vertex set V and edge set E

π: dominator partition of size k of G

Decision Variables

x_{vi}: 1 if vertex v is assigned to the ith block

d_{vi}: 1 if vertex v dominates block i

Objective Function & Constraints

$$
\begin{aligned}
&\min \quad 0 && \text{(no objective)} \\
&\text{s.t.} \quad \sum_{i=1}^{k} x_{vi} = 1, \quad \forall v \in V && \text{(each vertex is assigned to one block)} \\
&\quad \sum_{v \in V} x_{vi} \geq 1 \quad \forall i \in \pi && \text{(no empty blocks)} \\
&\quad x_{ui} + d_{vi} \leq 1 \quad \{\forall u, v \in V \mid \{u, v\} \notin E\}, i \in \pi && \text{(domination condition)} \\
&\quad \sum_{i=1}^{k} d_{vi} \geq 1 \quad \forall v \in V && \text{(each vertex dominates at least one block)} \\
&\quad \sum_{v \in V} x_{vi} \geq \sum_{v \in V} x_{v,i+1} \quad \forall i \in \{1, 2, \ldots, k-1\} && \text{(blocks are used in order)} \\
&\quad x_{vi}, d_{vi} \quad \forall v \in V, i \in \pi && \text{(binary variables)}
\end{aligned}
$$
